META STRUCTURED DATA

Every value came from somewhere.

The data arrives. The evidence does not.

AUDIT PREP

Assembled, not retrieved

Audit evidence is gathered from people and inboxes, after the fact.

COUNTERPARTY

Trust me, or redo it

A figure sent outside carries nothing with it.

BLIND SPOTS

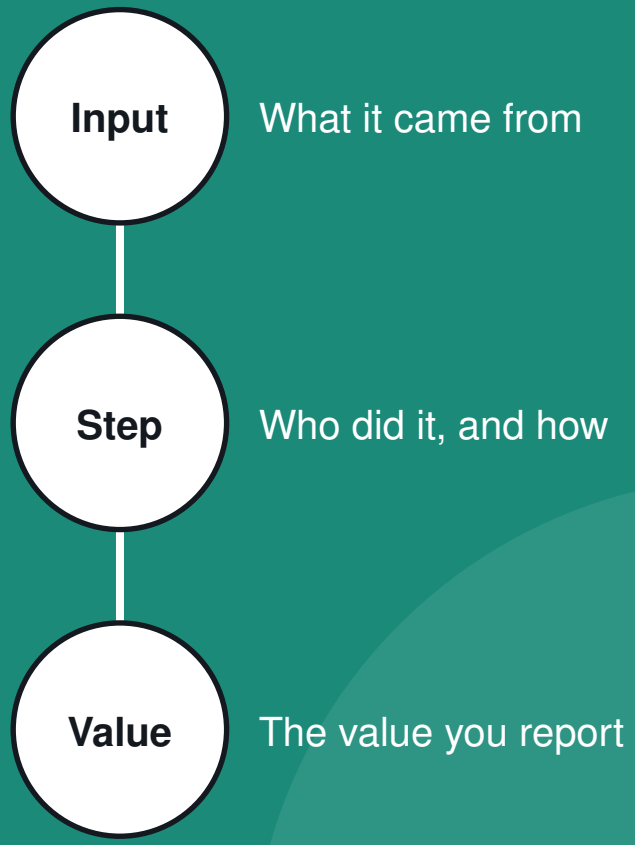

Gaps stay invisible

A missing approval looks the same as a completed one.

ABOUT MSD

A chain of custody for data.

MSD records what each value was made from, by whom, and in what way. Gaps show up instead of staying hidden.

Two kinds of step

VERIFIABLE

They can re-run it

Totalling a column, converting a currency, matching an invoice to a purchase order.

Same inputs, same answer, nobody has to be believed.

ATTESTED

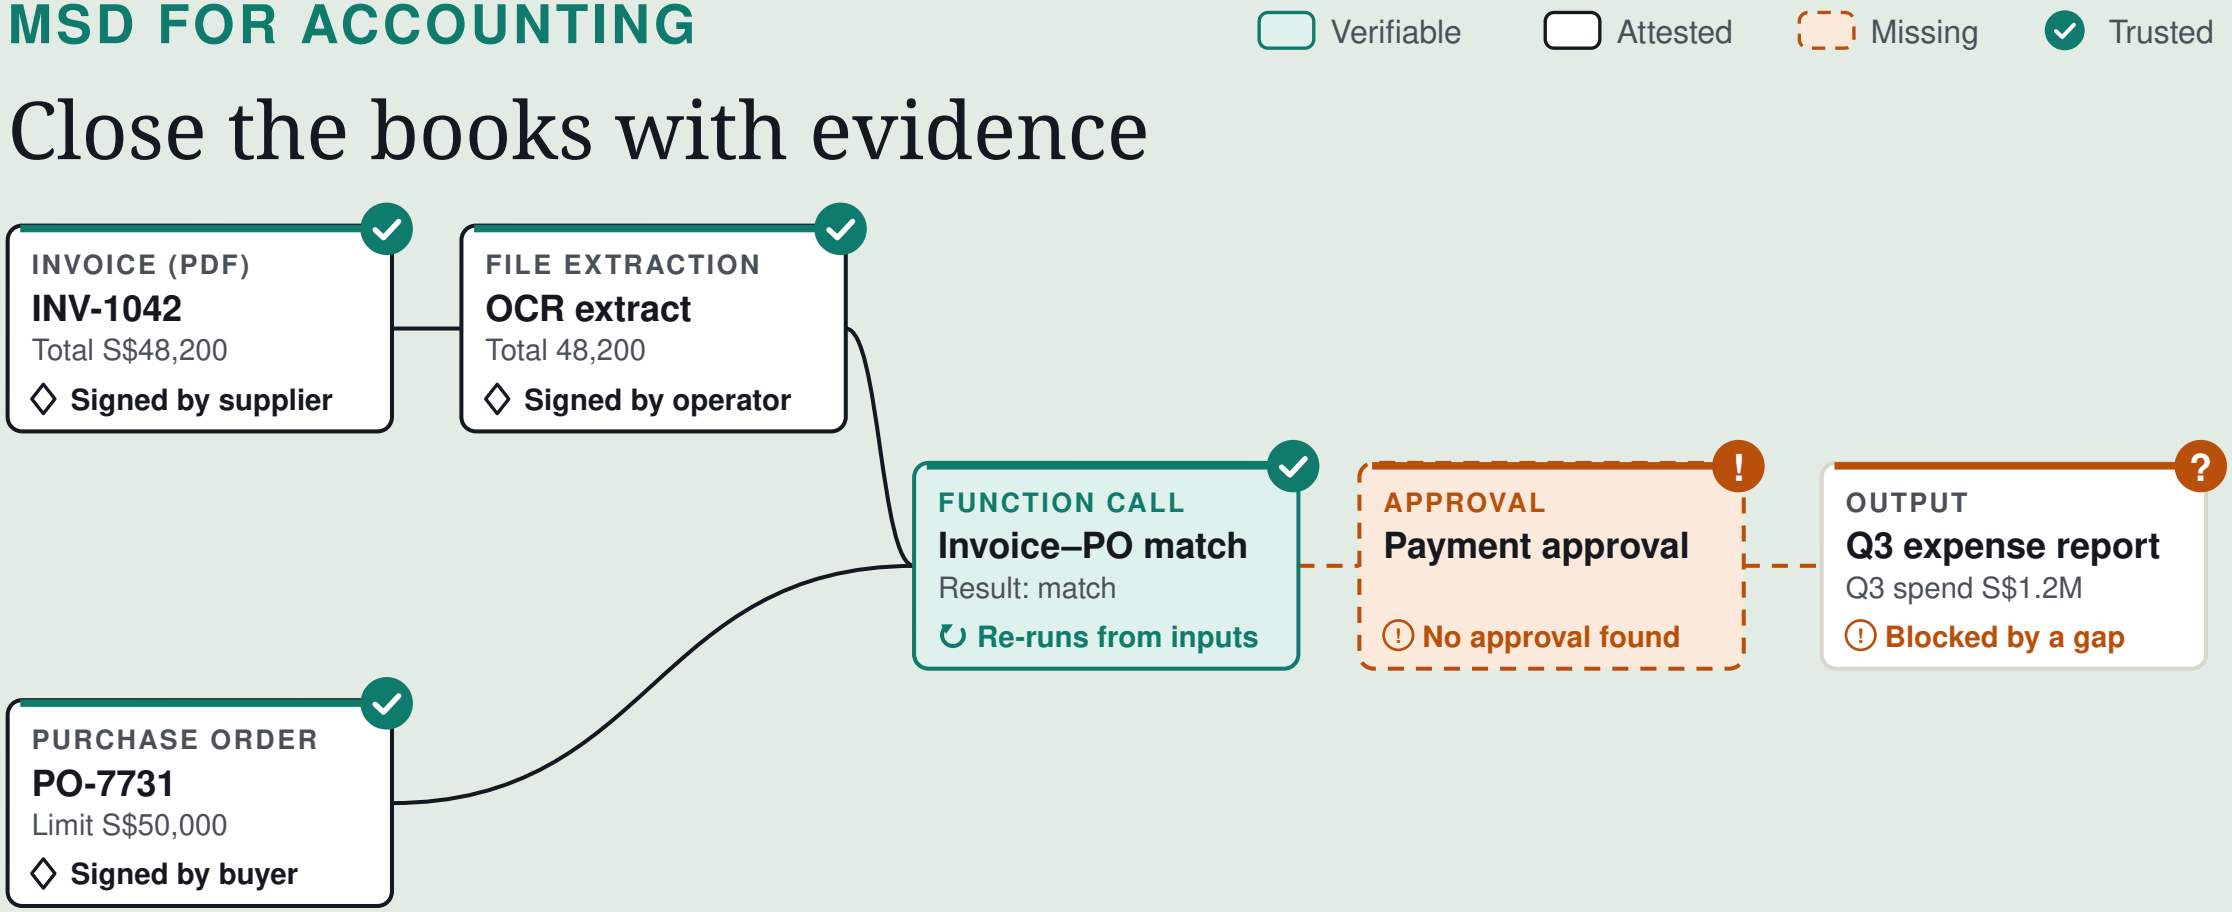

Someone signs for it

Reading a scan, asking a model, a human approval. The operator records inputs, method and result, and signs.

The signature is the evidence.

MSD FOR ACCOUNTING

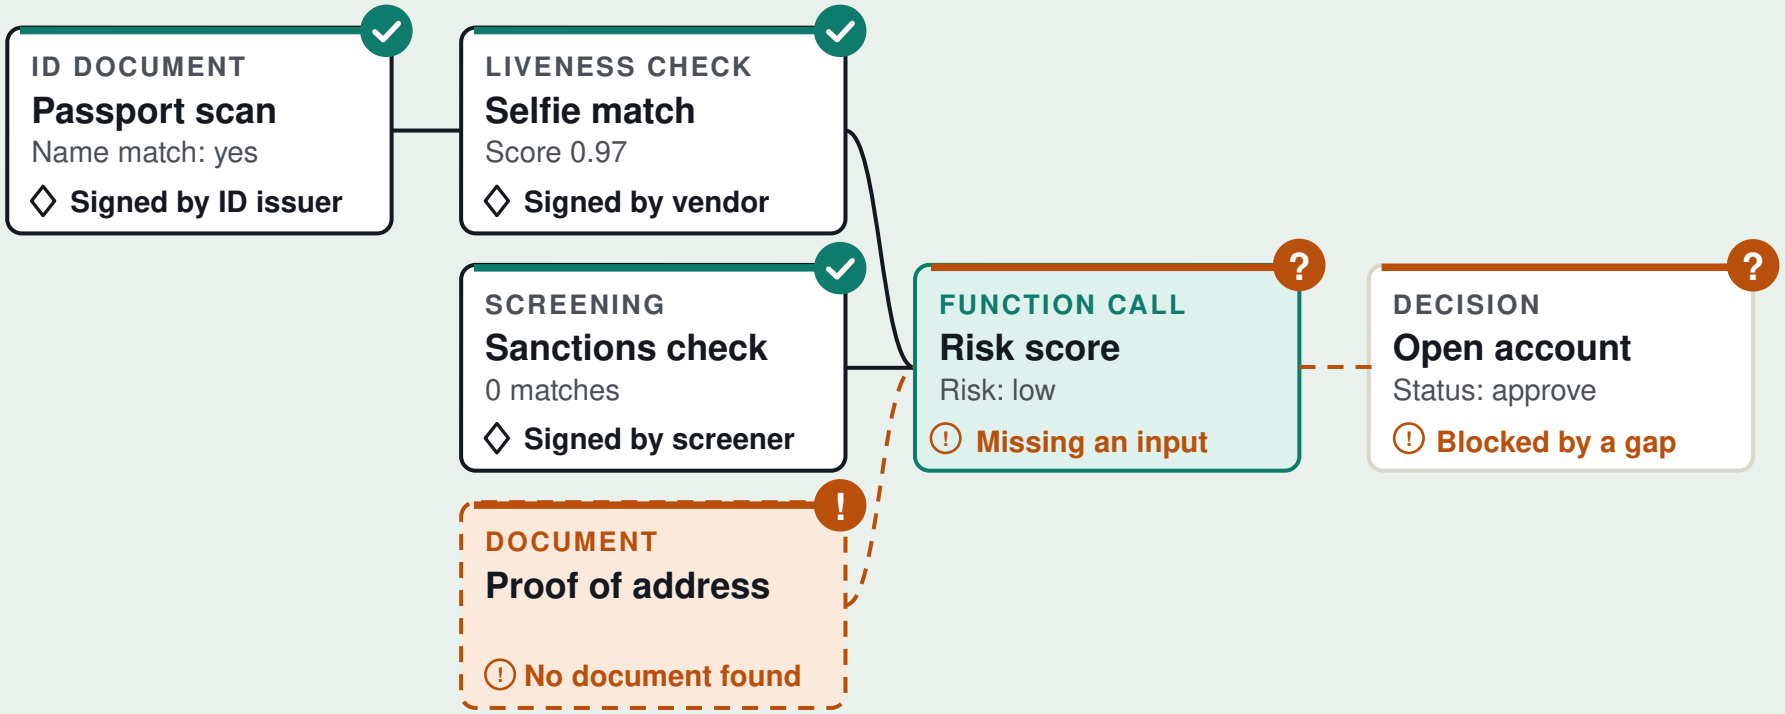

Close the books with evidence

The payment approval has nothing behind it, so the Q3 report shows the gap instead of passing silently.

MSD FOR COMPLIANCE

Not until every check is in

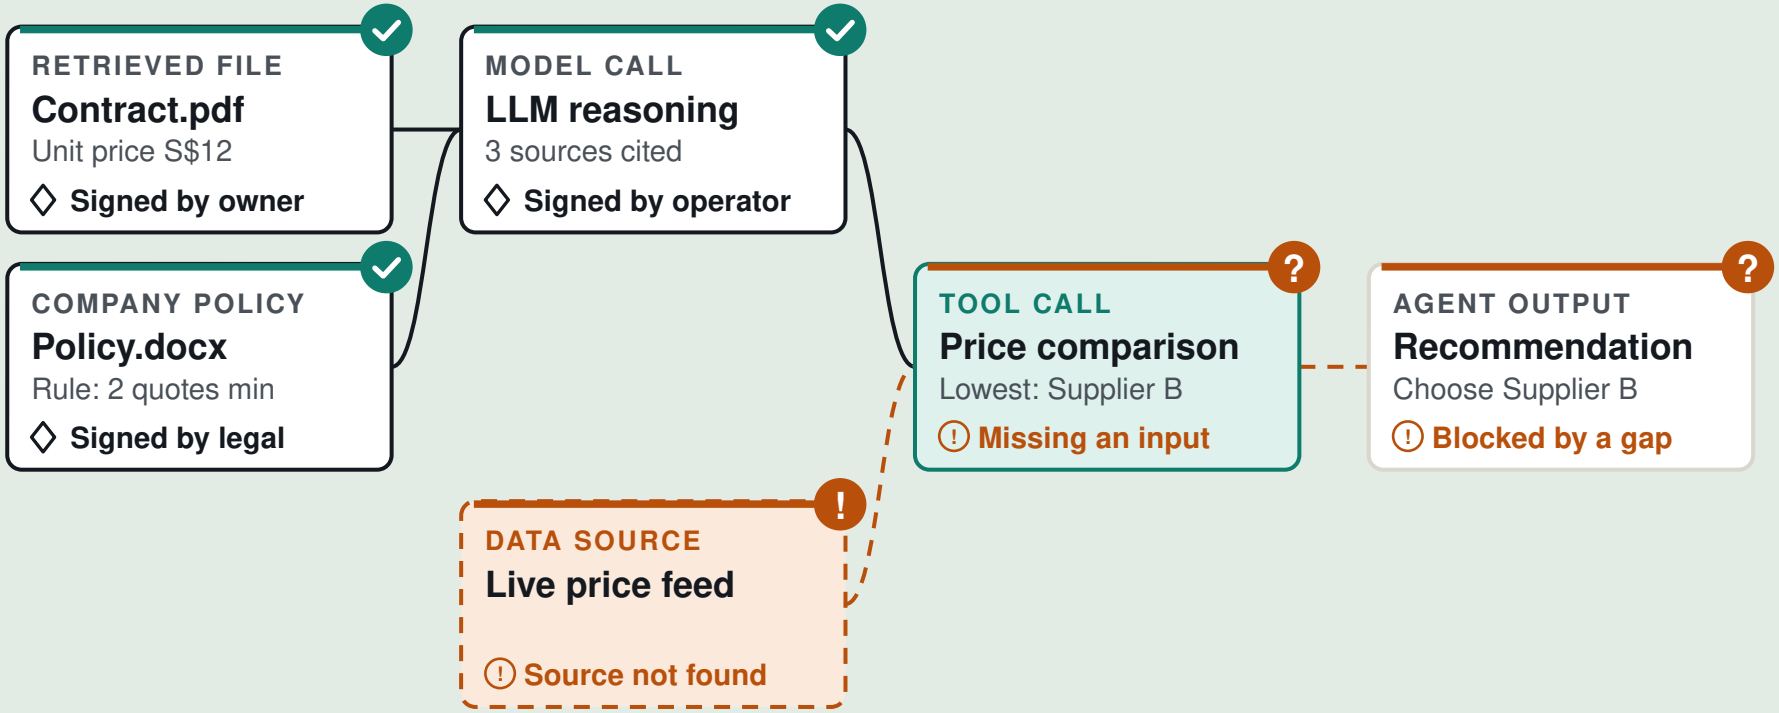

Proof of address was never filed, so the account decision waits instead of going through.

MSD FOR AI

Verifiable · Attested · Missing · Trusted

Trace a decision to its sources

The live price feed cannot be found, so the comparison and the recommendation built on it are flagged.

What an auditor does with it

1

Start from the figure

The published number and its signed statement.

2

Request the inputs

Each piece must match a reference in the evidence.

3

Re-run what can be re-run

Calculations agree or they do not.

4

Check signatures

Which key signed, and was it authorised?

5

Read the gaps

A step with nothing behind it is visible.

MSD today: a new, open protocol

AVAILABLE	**Signing and verifying**
AVAILABLE	**SDK and key tooling**
IN PROGRESS	**Visual graph tooling**

What it does not solve

- A signature points to a key, not a person.
- Checks cannot show a scan was read correctly.
- Later re-runs cannot repair a bad first reading.
- It records what happened, not whether it was acceptable.

META STRUCTURED DATA

Free and open.
Nothing to request.
